Task Analysis

Task Analysis is the process of breaking down a user's interaction with an application into smaller steps to understand how users complete their goals.

In the **ShopNova E-Commerce Application**, task analysis helps identify how users log in, search products, add items to the cart, and complete the checkout process.

By analyzing these tasks, developers and designers can improve the usability and efficiency of the application.

Key Aspects of Task Analysis

• User Goal – The main goal of the user is to browse products and purchase items from the application.

• User Actions – Users perform actions such as logging in, searching products, viewing product details, and adding products to the cart.

• Task Sequence – Tasks are completed in a logical order such as login → browse → add to cart → checkout → payment.

• System Response – The application provides feedback for each action, such as notifications when a product is added to the cart.

• Task Completion – The task is completed when the user successfully places an order.

User Flow

User Flow is the path that a user follows while navigating through an application to achieve a specific goal.

In the ShopNova application, user flow explains how the user moves from opening the app to completing a purchase.

It helps designers understand navigation patterns and improve the overall user experience.

Key Aspects of User Flow

• Navigation Structure – Shows how users move between different screens like login, home, product page, and cart.

• Decision Points – Displays choices users make such as selecting products or choosing payment methods.

• Screen Transitions – Shows how users move from one interface screen to another.

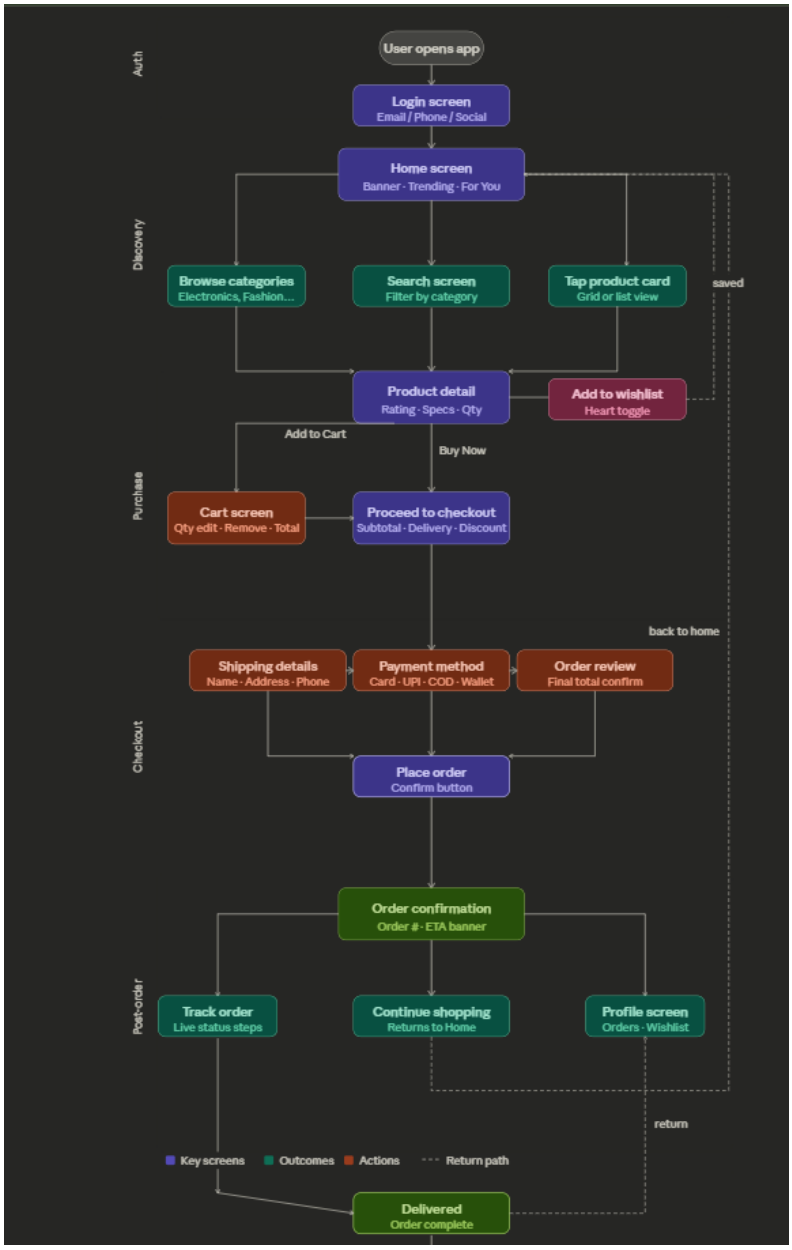
• User Interaction – Represents actions such as clicking buttons, adding products, or searching items.

• Goal Completion – The final stage where the user successfully places an order.

User Flow for ShopNova E-Commerce Application

Start
→ Open App→ Login/Register→ Home Page→ Browse Categories→ Search Products→ View Product Details→ Add to Cart→ Open Cart→ Review Cart→ Proceed to Checkout→ Enter Shipping Details→ Select Payment Method→ Place Order→ Order Confirmation→ Track Order

User Flow for an E-Commerce Website



Steps in the User Flow

Step 1: Start

• The user opens the ShopNova e-commerce application.
• The login screen is displayed to the user.

Step 2: Login or Register

• If the user already has an account, they log in using email, phone, Google, or Apple.
• If the user is new, they must create an account before continuing.

Step 3: Home Page

• After login, the user is directed to the home page.
• The home page displays categories, trending products, and recommendations.

Step 4: Browse Product Categories

• The user can explore different product categories such as Electronics, Fashion, Groceries, and Home.

Step 5: Search and View Product

• The user can search for products using the search bar.
• Clicking on a product opens a detailed product page with price, rating, and description.

Step 6: Add to Cart

• The user selects a product and adds it to the cart.
• The application shows a notification confirming that the item has been added.

Step 7: Review Cart

• The user opens the cart page to review selected items and check the total price.

Step 8: Proceed to Checkout

• The user clicks the checkout button to begin the purchasing process.

Step 9: Enter Shipping Details

• The user enters delivery information such as name, address, city, ZIP code, and phone number.

Step 10: Payment Process

• The user selects a payment method such as Credit Card, UPI Payment, Digital Wallet, or Cash on Delivery (COD).

Step 11: Order Confirmation

• After payment, the system confirms the order and displays an order summary.

Step 12: Track Order

• The user can track the order status such as Order Confirmed, Processing, Shipped, and Delivered.

Step 13: End of Process

• The purchase process is completed.
• The user can continue shopping or view order details.
