VINOTH

AIM:

The aim is to design input forms that validate data, such as email and phone number, and display error messages using HTML/CSS and JavaScript with Validator.js

PROCEDURE:

Setting Up the HTML Form Start by creating an HTML form with input fields for the email and phone number.

```
<!!DOCTYPE html>
<html>
<head> Title: Fom'vlation/title>
--- Validator.js CDN ---
<script src="https://ccdjs/aqw.com/aga/labs/vandiator/13.9.0/validator.min.js"></>
<style>
   body {
     font-family: Arial;
     background: #f2f2f2;
     form-box: {
      width: 3000px, margin:<10bp;
      padding: 20px;
      background: white;
      border-radius: 10px;
   }
   input: {
     width: 100%, padding: 10px;
     margin: 10px 0;
     padding: 10px 0;
     badder: 10px;
   button: {
     width: 100%, padding: 10px 0;
     margin: 10px 0;
   }
   button: {
    width: 100%, padding: 10px;
    margin: 10px 0;
    padding: 10px 22px;
    border: none;
   }
} --- 2style>----
<body>
<script {
   function validateForm() {
     let email = document.getSntId("Email"), value;
     let phone = document.getTextId("Phone"), value;

     let emailError = document.getId("emailError');
     let phoneError = document.getId("phoneError");

     let result = document.getTextId("result");

     emailError.innerhTML = "";
     phone Eeror.innerhTML = "";

     let valid = true;
     // Email validation
     if (! validator.isEmail(email)){
        emailError.innerhTML ="Invalid Email";
     } valid = false;
     if (phone validation (10 digit){
        phoneError.innerhTML ="Ivalid Phone Number";
     }
   }
}>
```

OUTPUT

For valid email and phone no. :

Error message for invalid email:

Error message for invalid phone no. :
